PERC REPORTING STANDARD 2017
PAN-EUROPEAN STANDARD FOR REPORTING OF
EXPLORATION RESULTS, MINERAL RESOURCES AND RESERVES
("THE PERC REPORTING STANDARD")

The Pan-European Reserves and Resources Reporting Committee (PERC asbl)
approved and published 16th June 2017

Table of contents

1	Foreword	2
2	Introduction	2
3	Competence and Responsibility	8
4	Reporting Terminology	13
5	Reporting General	14
6	Reporting of Exploration Results	18
7	Reporting of Mineral Resources	23
8	Reporting of Mineral Reserves	31
9	Reporting of Mineralised Fill, Pillars, Low Grade Mineralisation, Stockpiles, Dumps and Tailings	40
10	Reporting of Exploration Results, Resources and Reserves for Coal	41
11	Reporting of Exploration Results, Mineral Resources and Mineral Reserves for Diamonds	43
12	Reporting of Exploration Results, Mineral Resources and Mineral Reserves for Industrial Minerals, Cement Feed Materials and Construction Raw Materials	46
13	Reporting of Exploration Results, Mineral Resources and Mineral Reserves for Oil Shales, Oil Sands, and other energy minerals extracted by mining methods	48
14	Reporting of Exploration Results, Mineral Resources and Mineral Reserves for Metallic or Non-Metallic Minerals extracted by solution mining methods	49
15	Disclosure of Exploration Results, Mineral Resources and Mineral Reserves for Dimension Stone, Ornamental and Decorative Stone	51
16	Disclosure of Estimates of Mining and Other Waste Materials of Potential Economic Value	54
17	Disclosure of Previously Reported Estimates	56
18	Aggregation of estimates from multiple deposits	56
19	Non-Public Reporting	57

The project objective is to apply a new approach to **resource estimation** for tailings.

The objective is to provide reliable quantitative data on the content of **valuable elements and pollutants** in tailings ponds for **feasibility studies**.

- First step in the **value chain** as a basis for further services of the **rECOm**ine network

High-resolution **characterisation** of the tailings with cost-effective probing technology.

- **Digital data acquisition** in real time (metals, elements, geotechnics, hydraulic permeability)

Development of a **model** of the tailings to map the chemical and mineral distribution patterns.

- **Internal geometry**, contaminant distribution, hydraulics, soil classes, stratification

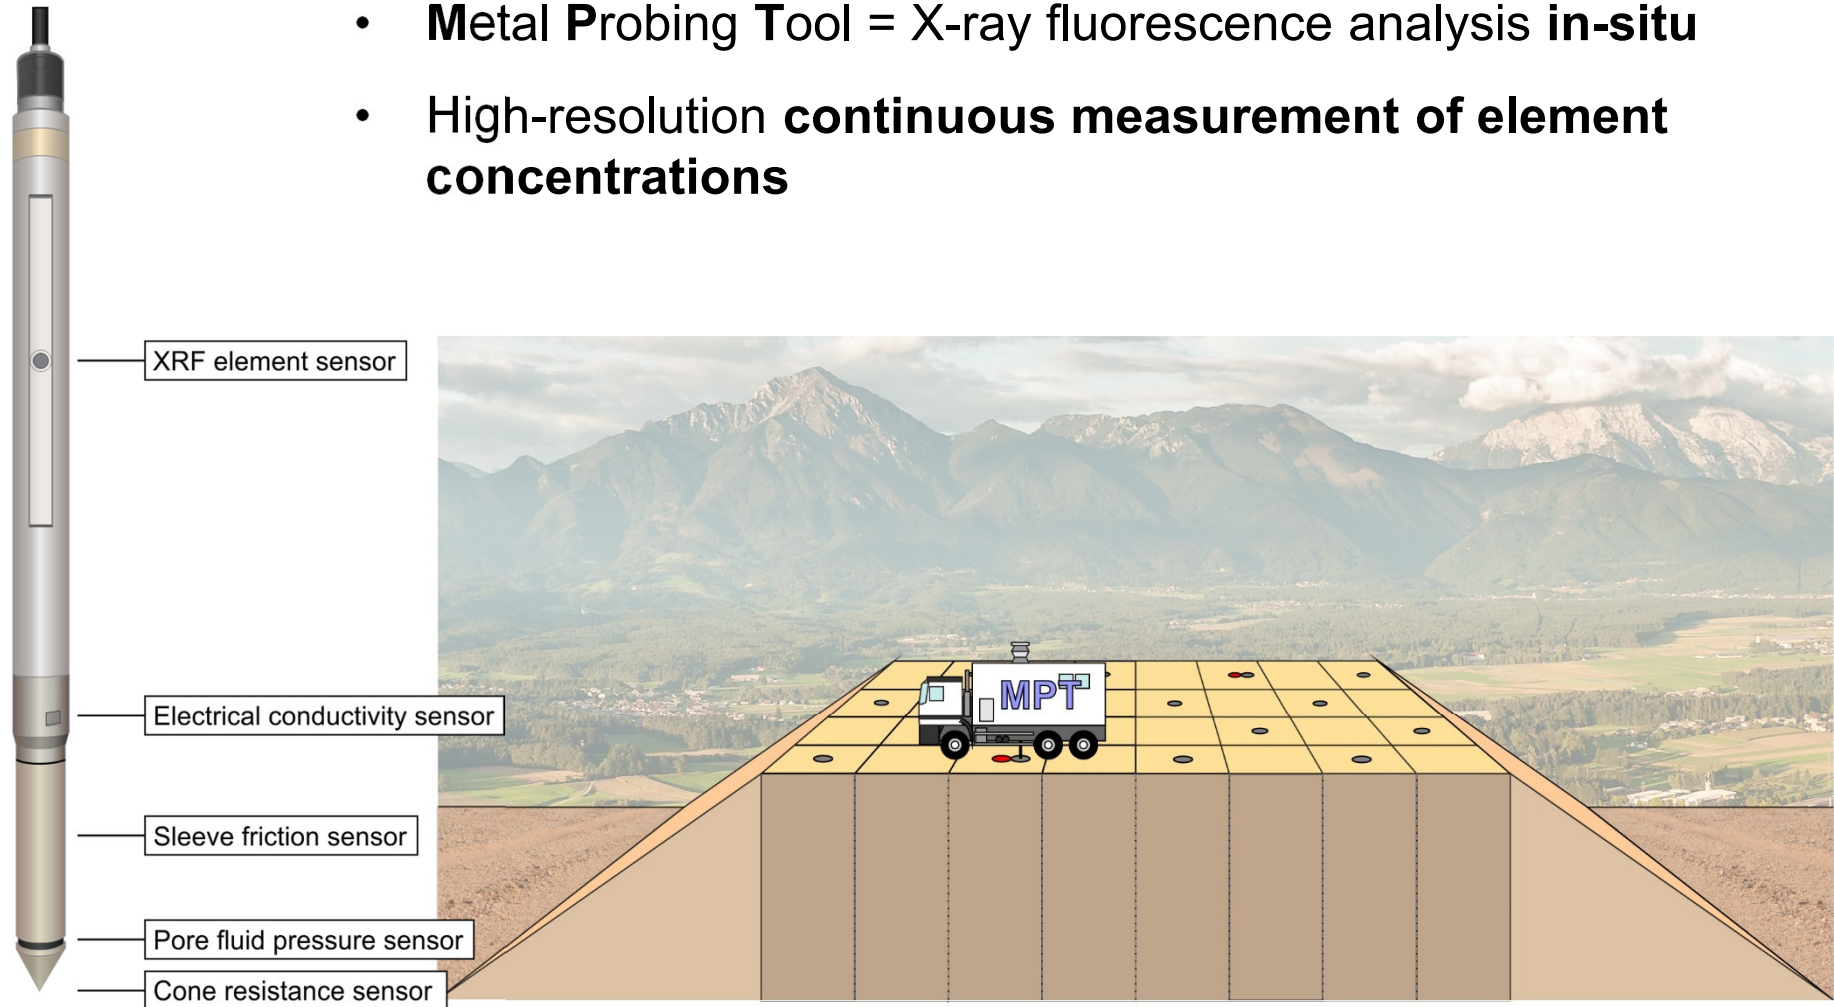

Economic evaluation of **resources and reserves** according to International Standard (**PERC**)

- Application of the code to sedimentary bodies, variography, interpolation, block model.
- Resource statement with safety probability according to PERC

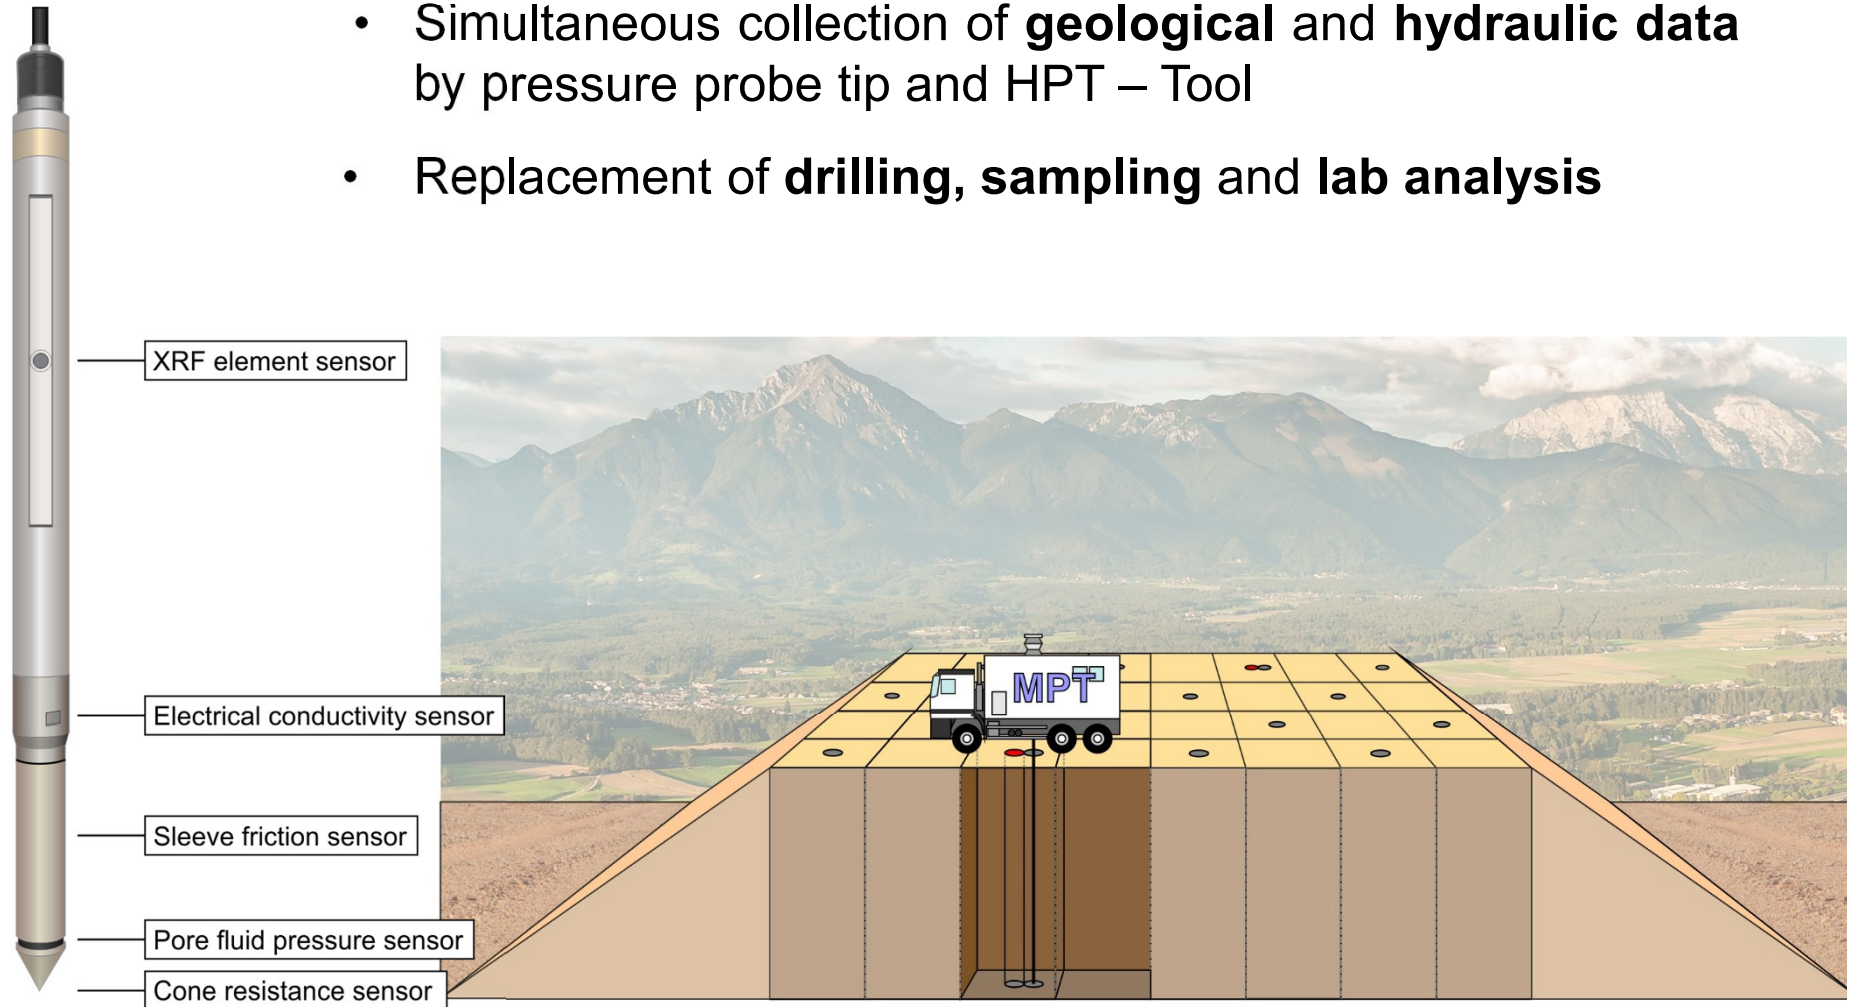

Input - parameters for **environmental remediation** and **secondary mining** by in-situ processes.

- In-Situ Cementation = Sealing
- In-Situ Leaching
- Hydraulic systems

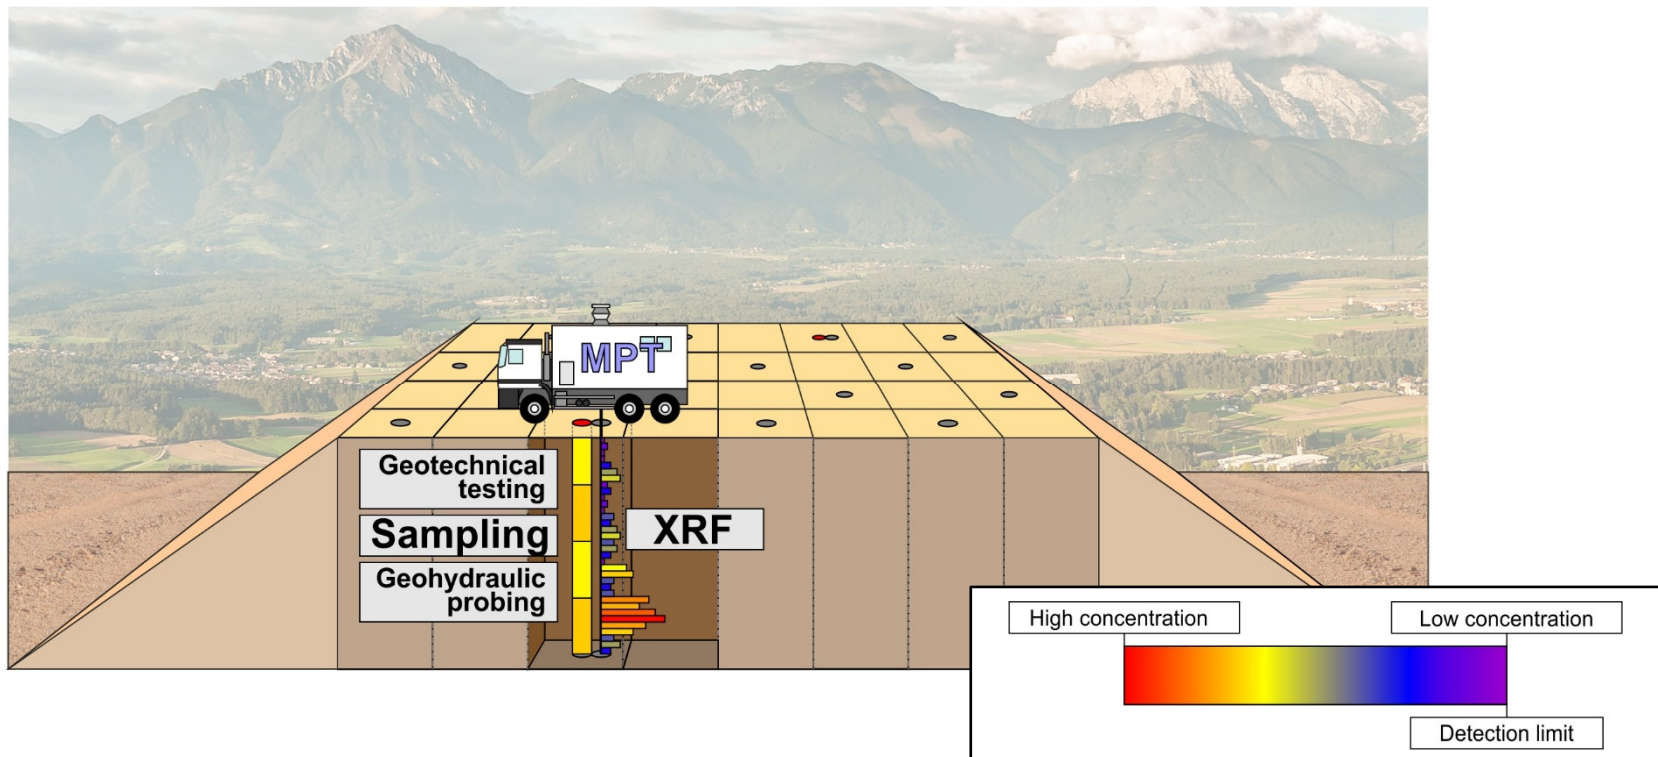

- **Metal Probing Tool** = X-ray fluorescence analysis **in-situ**
- High-resolution **continuous measurement of element concentrations**

- Simultaneous collection of **geological** and **hydraulic data** by pressure probe tip and HPT – Tool
- Replacement of **drilling**, **sampling** and **lab analysis**

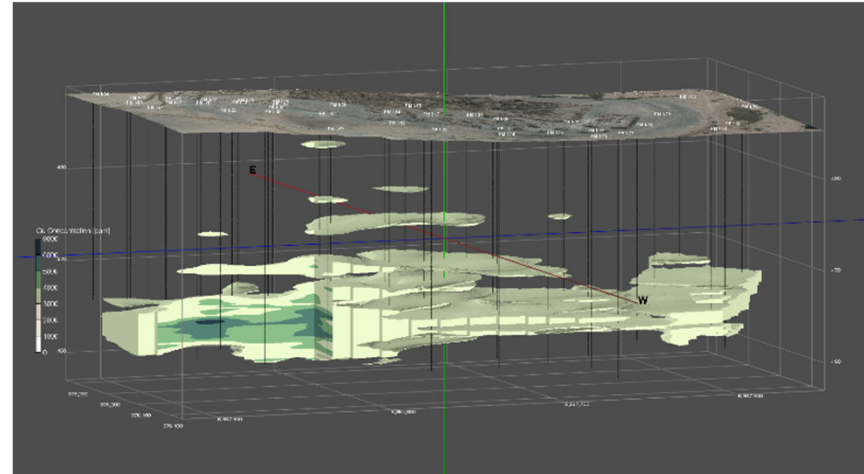

- Selected sampling by **Direct – Push technology**
- **Calibration** of in situ measurement data
- **Mineralogical analysis** and classification

- Derivation of the internal geometry on the basis of **soil classes**
- **Interpretation** of sedimentologically defined **tailing sub-bodies**
- Mapping of **mineralogical distribution patterns**

- **Multivariate statistics** to determine element factors
- Interpolation of identified sub-bodies by means of **geostatistics / variography**
- **3D - modeling** of the inner geometry and the concentrations of **valuable substances / pollutants**

- **Block model** on the basis of the **3D pollutant / valuable material identification**
- **Exploration report** with statement of the **probability & cut-off** for elements and combinations
- **Resource Statement** according to **PERC**

Thank you for your attention!
